EDUCATION

B.Sc. in Computer Engineering

An-Najah National University, Nablus, Palestine
Sep 2022 – Expected Apr 2027 | GPA: 3.10/4.0

High School Diploma

Dear Sharaf High School, Nablus, Palestine
2022 | Grade: 95.7%

TECHNICAL SKILLS

Programming Languages: C, C++, Java, Python, JavaScript, SQL

Web Technologies: HTML, CSS, React, PHP, JavaScript

Database: MySQL, SQL

Hardware Engineering: VHDL, Verilog, Assembly, Arduino

Tools: Git, GitHub, VS Code

PROFESSIONAL DEVELOPMENT

- React Introduction Course
- Web Programming with Python and JavaScript
- Git and GitHub Course
- SQL Course
- JavaScript Course
- Front End Web Developer

LANGUAGES

Arabic Native

English Proficient (C2 EF SET Test)

AWARDS, VOLUNTEERING, & EXTRA-CURRICULAR ACTIVITIES

Mini Olympic Problem-Solving Competition,

An-Najah National University, 2024

Member of a competitive programming team, contributing to rapid on-the-spot problem solving, solution design, code implementation, and final review before submission.

Volunteering with Engineering Without Borders (EWB)

An-Najah National University, 2024

Coordinated and led student events for 50+ participants, supporting event planning and execution.

Academic Excellence Award for Top 5%

Dear Sharaf High School

Awarded 12 times, years 2010 to 2022.

SUMMARY

Computer Engineering student with hands-on experience in full-stack web development, software engineering, and algorithmic problem-solving. Built responsive web applications and database-driven systems using Java, JavaScript, PHP, MySQL, and Python, with strong hardware integration experience. Motivated to contribute to high-performing engineering teams and continue growing in software development and intelligent systems.

PROFESSIONAL EXPERIENCE

Freelance Web Developer

2023-Present

- Developed responsive websites for local businesses using HTML, CSS, JavaScript, and PHP.
- Built MySQL-backed functionality to support dynamic content, structured data handling, and practical business needs.
- Improved usability and front-end responsiveness to create cleaner, more user-friendly digital experiences.
- Managed development tasks independently from implementation through refinement and delivery.

SELECTED PROJECTS

AM Store Database Project

- Designed a relational database in MySQL, including tables, relationships, and SQL queries for structured data organization and retrieval.

AM Computers Store | E-commerce Website

- Built a responsive web application using HTML, CSS, JavaScript, and PHP, with product display functionality and database connectivity for dynamic content management.

Java Network Project

- Developed a client-server application using Java sockets to support communication between distributed components.

Tic-Tac-Toe AI | Search and Machine Learning

- Built a Java Swing game using Minimax, alpha-beta pruning, and a perceptron-based evaluation function, with multiple difficulty levels.

Library Management System

- Engineered a modular library system using object-oriented design principles and layered architecture.
